

Guardian 7000

Ultra-High Security Fence System

THE ULTRA-HIGH SECURITY FENCE

The Guardian Fence System® is the first system to provide a total security solution, with designed raceways for seamless security integration to create a “system within a system-of-systems.” Strong layered security mesh, constructed within a modular framework, makes this fence barrier ideal for high risk security projects.

Recommended for:

- Critical Infrastructure
- Border Security
- High-Risk Industrial Facilities
- Military Bases
- Chemical Facilities
- Government Buildings
- Utilities

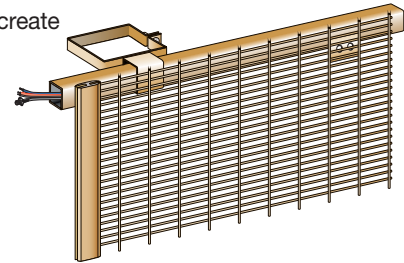

BENEFITS

Anti-Cut & Anti-Climb

The heavy gauge security mesh within the Guardian 7000 series strongly resists both cutting and climbing. Both deterrence and delay are affected by small mesh openings that resist common cutting tools and hand or foot holds.

Modular Design

Steel rails within the Guardian Fence System® create a protective raceway for security component cabling such as intrusion detection, surveillance and access control; providing a superior, fully-integrated security barrier. The Guardian Fence System® allows for efficient installation, upgrade, repair and maintenance.

Long Service Life

High quality galvanized steel and aluminum components provide for a long service life. The Guardian Fence System® is also available with a super-durable, Architectural Grade Powder Coating.

Anti-Ram Barrier Add-On Available

M30, M40 and M50 Rated Anti-Ram Barriers installed alongside Betafence USA's Guardian 7000 provide anti-ram resistance along the perimeter fence line.

U.S. Patent No. 7,628,386. Additional U.S. and International Patents Pending.

The Original Modular High Security Fence System

Panels

High strength security mesh panels create an effective anti-cut, anti-climb barrier. The Guardian 7000 model is offered standard with double-layered mesh, increasing both the deterrence and delay levels of the barrier. Additional mesh options are available to meet specific risk or architectural requirements.

High Security Guardian Unions

Guardian Unions connect the security mesh panels with panel brackets to horizontal rails within the Guardian Fence System®. The Guardian Union is also secured with bolted steel straps, maintaining high strength in the fence system.

Posts and Rails

Panels are affixed to steel rails, which are attached to the steel posts. This modular configuration allows for efficient installation – and means that exact post spacings are not a requirement!

Gates

Strong and secure anti-cut, anti-climb and anti-ram gates are available in a full range of styles, including Swing, Slide and Cantilever.

Coating

The Guardian Fence System® panels and gates are standard with a superior galvanization, and are available with Betafence USA's exclusive Super-Durable powder coating. This coating provides long-lasting protection from U.V. rays and salt spray.

Warranty

The Guardian Fence System® is backed by a 10-Year Manufacturer's Warranty, giving the peace of mind that the world's leading producer of fencing stands behind this product.

Anti-Ram Barrier Add-On Available

The Anti-Ram barrier is a stand-alone solution, providing a formidable resistance to vehicular attack.

Standard Options	
Height	10', 12', 15' and 20'
Security Mesh	DutyGuard 3-5-8M (double layer) or - DutyGuard 3-5-6 & MiniLouver 75
Guardian Union	GU H-S
Rails	
Galvanized Finish	1-7/8" SS40
Powder-Coated	2" TS x 16ga
Posts	
Galvanized Finish	6" Sch 40
Powder-Coated	6" TS x 3/16" PG
Anti-Ram Barrier	M30, M40, M50

Additional options available. Please call us with your project requirements, for a risk-based custom solution.

Guardian 7000 Standard Mesh Options

Welded Wire
