

Strong Vehicular Resistance

True Strength

The Normandy Barrier provides formidable resistance against vehicular intrusions across perimeter lines, while allowing for animal passage.

Recommended for:

- Border Protection
- Military Sites
- Protected Forestry Areas
- National Parks
- Temporary Barriers
- Urban Defense

BENEFITS

Proven Stopping Power

Currently in use along the U.S. southern border, this barrier solution presents a formidable and imposing deterrence against unauthorized cars, trucks, 4-wheelers and motorcycles, with a design to stop a 10,000 pound vehicle moving 40 miles per hour.

Clear Deterrence

The heavy construction and design of the Normandy Barrier provides an obvious deterrence against vehicular ramming.

Easy Installation

Normandy Barriers by Payne are manufactured with U.S.-made steel, and are constructed for simple and rapid deployment and installation without water, concrete or excavation.

Security Integration

This barrier solution can be integrated with Intrusion Detection and other electronic security components, protecting cabling through a raceway of steel rails within the framework of the Normandy Barrier.

Proven Vehicular Deterrence

Barrier Sections

Normandy barrier sections are 24 feet wide, constructed with high-strength tubular and structural steel components.

Sections are connected in the field to create a seamless, long perimeter barrier, and are available in configurations to meet stringent risk-based performance standards against vehicular attack.

The Normandy Barrier is designed for surface mounting, without concrete or water.

Domestic Production

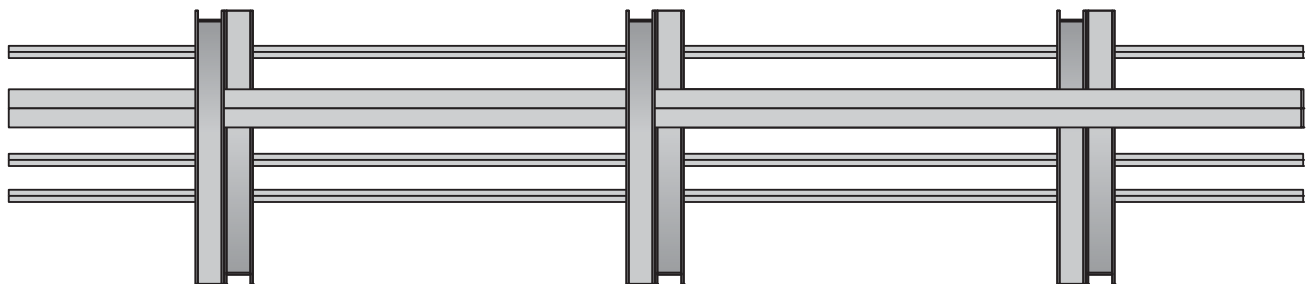

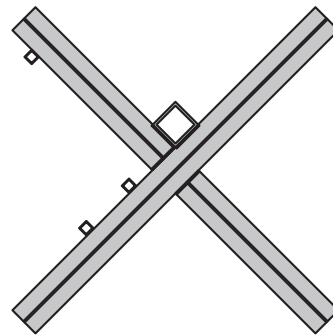

The Normandy Barrier is manufactured domestically, with U.S.-made steel components.

Coating

Normandy Barriers are available uncoated or galvanized, produced to ASTM A-123 standards, providing a long service life with protection against weather damage.

Normandy Barrier – Optional Configurations

ASTM M30	15,000 lb. vehicle / 30 mph
ASTM M50	15,000 lb. vehicle / 50 mph
